From full-foot to open-heel, your next pair of fins from Aqualung are waiting. Our fins are technology-packed to provide the ultimate in durability, control, and performance.

Comfort is key and ensured by our ergonomic features such as the mid-foot pivot point or customizable options such as our three choices of heel straps. Kick confidently with fins from Aqualung.

Fins[®]

Our Fin Technologies.

MID FOOT PIVOT POINT (PATENT)
The fin blade connects via dual pivot points to the middle of the foot pocket, allowing for a natural foot position, larger range of motion, and increased control.

CHANNEL STRUCTURE
Molded channels are structured for smoother water movement over the blade, producing strong movements in any water conditions.

WAVE RIB TECHNOLOGY
Unique composite material side ribs produce a wave effect as your energy output is transferred through the fin, providing power improving kick efficiency.

HYDRO POWER VENT
Vent at the top of the foot pocket allows water to channel through the blade, reducing resistance and providing stability for any kicking style.

Wave Rib

The elastomer rubber sections of the side ribs work together with the wave-shaped structures, accumulating (loading) the energy

of every kick that is released during the kick cycle. The effect is a solid, powerful yet easy kick.

Straps & Buckles System

Our buckles and straps are fitted to the fin using a mushroom fitting, this aids the buckle in both being fully secure while still being able to rotate in all directions no matter what force

is applied. The straps used are varied from our Silicone Bungee to stainless steel springs to our made in house polymer straps.

WHICH DIVE SUIT IS FOR ME ?

DRYSUIT

A drysuit keeps the diver dry. Thermal protection comes from what you wear underneath, or the dry suit itself depending on its material, in addition to an adjustable layer of air.

SEMI-DRYSUIT

Semi dry-suits have ankle, wrist and neck seals designed to reduce the flushing effect of water. This is less when compared to how much water can flush through a wetsuit. The effect of less 'flushing' of water means that less cold water enters.

FULL SUIT/2 PIECES

Wetsuits, available in full or two-piece designs, provide thermal insulation by trapping a thin layer of water against the skin. The varying thickness of the material caters to different water temperatures. **Full suits** cover the diver from neck to wrist and ankle, and **two-piece suits** offer easier donning and doffing along with enhanced comfort.

SHORTY

Shorty wetsuits end just above the elbows and knees. They typically feature thinner neoprene, and keep your core warm while allowing free movement of arms and legs.

LAMINATION

Water-based Glue

The laminating glue is water-based hence eliminating solvent volatile compounds.

FABRICS

Dope-Dyed Yarn

Dope-dyeing infuses dye pigments into molten plastic solution to produce yarns without dyeing process. This saves tremendous amounts of water while reducing energy consumption and water pollution.

NEOPRENE RUBBER FOAM

Eco Carbon Black

Carbon black, one of the key ingredients of neoprene, can now be pyrolyzed made from scrap rubber tires.

This significantly reduces energy consumption and reduces CO₂ emission by 200g per wetsuit.

Limestone

We use earth mined limestone to replace petrochemicals in our neoprene. It comes from nature and has less environmental impact.
